

Unpack [_Update-Zip-Packager.zip](#) to the root of one of your disks (C: D: etc)

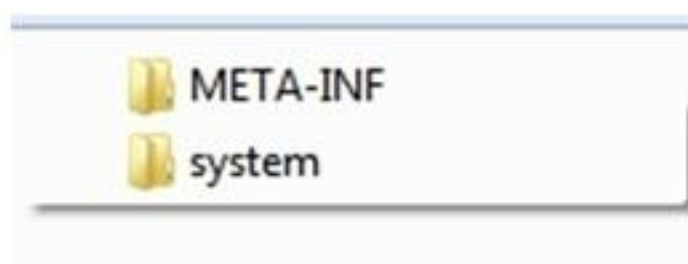

Open folder "[Unpack _Update-Zip-Packager](#)" and then folder "[placeholder](#)"

Unzip [patch.zip](#) (or [g12refM1005A1.zip](#))

– from your downloaded factory firmware

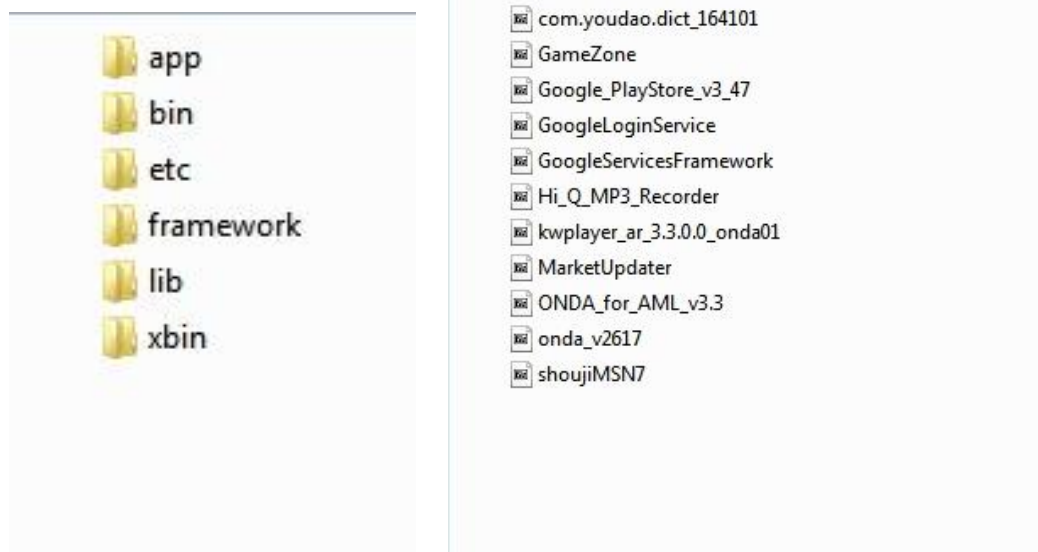

to folder "[placeholder](#)"

Open folder "[META-INF](#)" and delete

Open folder “**system**” then folder “**apps**” and delete all or some Chinese apps

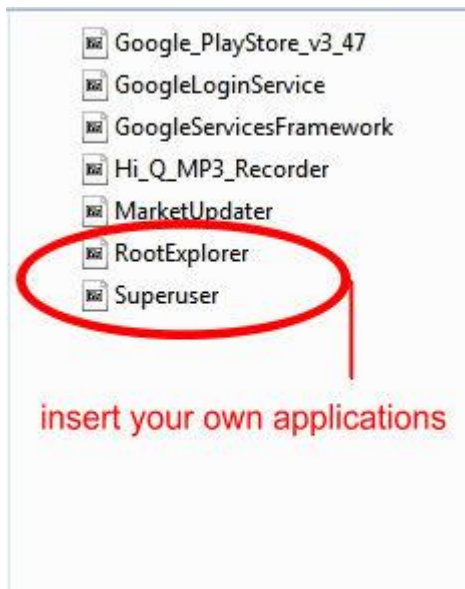

At the end you will receive structure

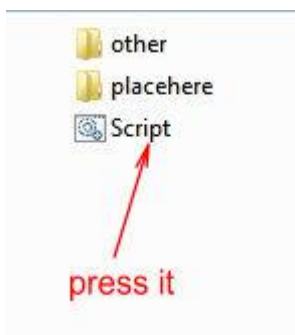

Now you are ready to insert your own system applications.

VERY IMPORTANT – when you insert you own applications, their name **must do not have GAPS and DOTS** (for example, **Titanium Backup v.5.1.12** must be renamed to **Titanium_Backup_v_5_1_12** or **TitaniumBackup5112**)

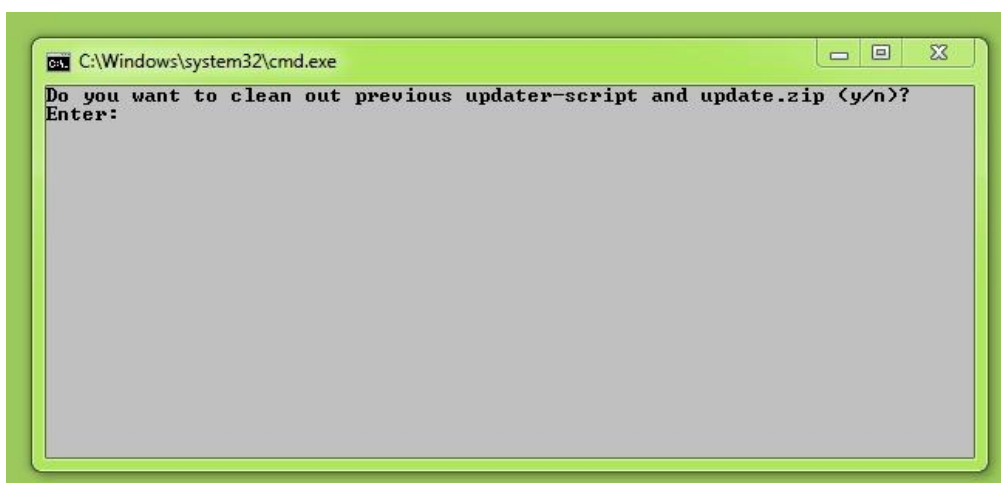

Below is an example for Superuser and RootExplorer applications

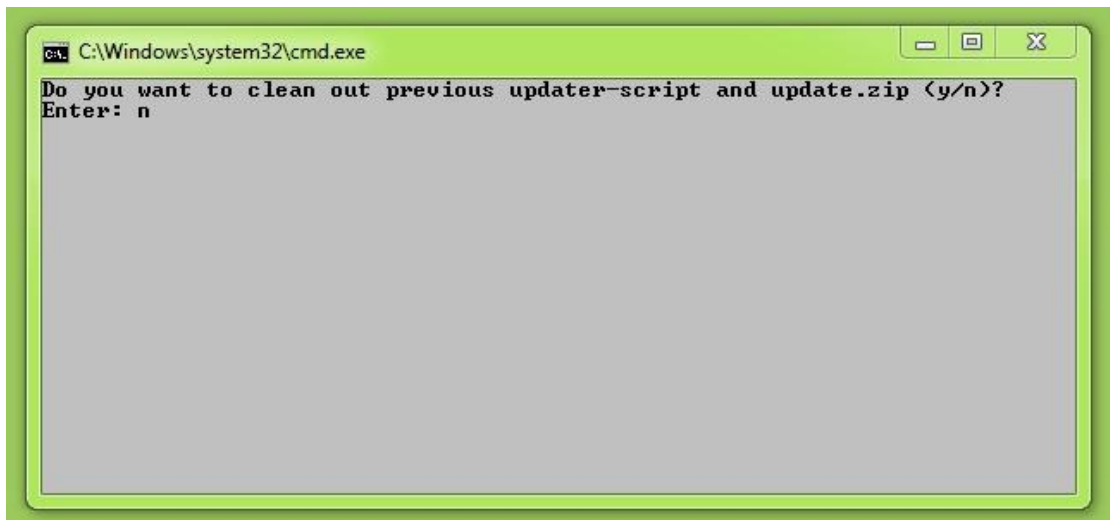

After that go back and press “script”

Script start to work:

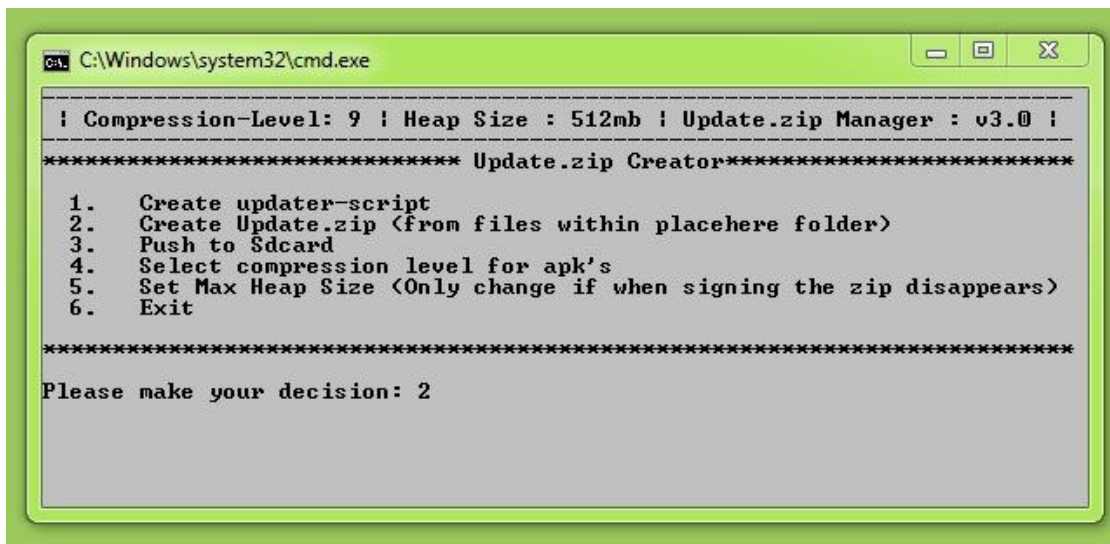

Enter “n” (no – if you start first time and folder “placehere” is empty

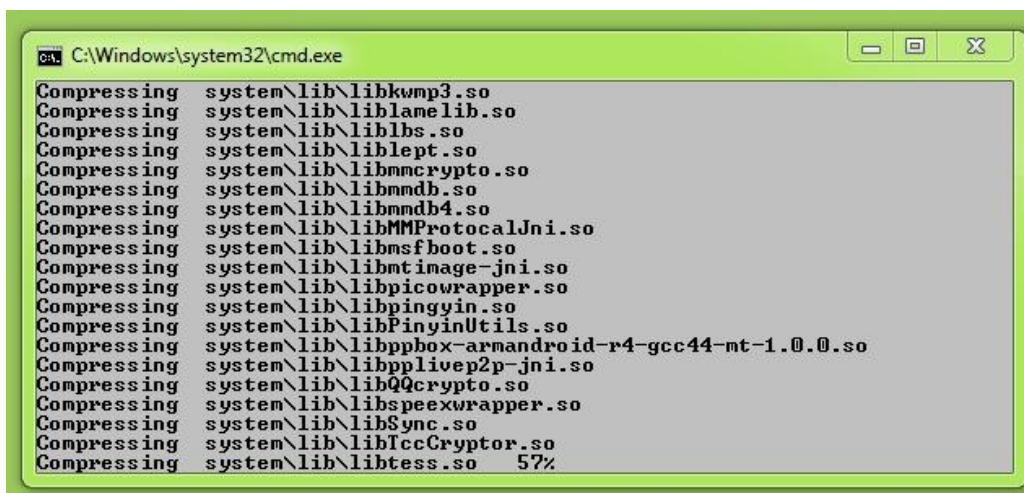

```
C:\Windows\system32\cmd.exe
Do you want to clean out previous updater-script and update.zip (y/n)?
Enter: n
```

Choose “2”

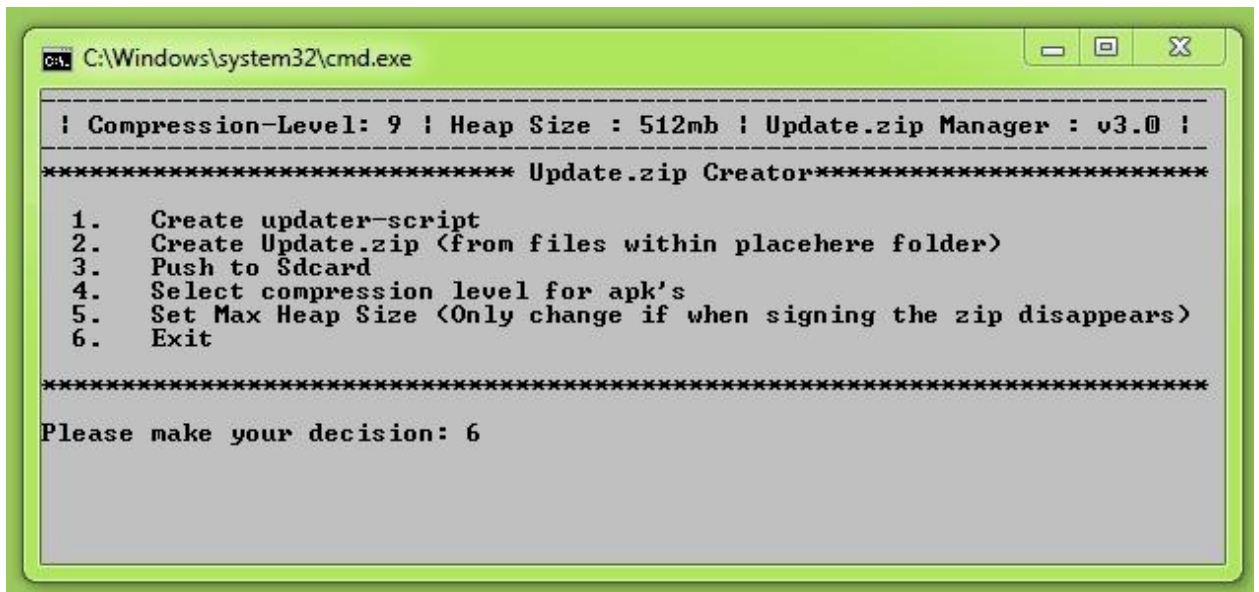

```
C:\Windows\system32\cmd.exe
! Compression-Level: 9 ! Heap Size : 512mb ! Update.zip Manager : v3.0 !
***** Update.zip Creator*****
1. Create updater-script
2. Create Update.zip <from files within placehere folder>
3. Push to Sdcard
4. Select compression level for apk's
5. Set Max Heap Size <Only change if when signing the zip disappears>
6. Exit
*****
Please make your decision: 2
```

Waiting....

```
C:\Windows\system32\cmd.exe
Compressing system\lib\libkwp3.so
Compressing system\lib\liblamelib.so
Compressing system\lib\liblbs.so
Compressing system\lib\liblept.so
Compressing system\lib\libmmcrypto.so
Compressing system\lib\libmddb.so
Compressing system\lib\libmddb4.so
Compressing system\lib\libMMProtocolJni.so
Compressing system\lib\libmsfboot.so
Compressing system\lib\libmtimage-jni.so
Compressing system\lib\libpicowrapper.so
Compressing system\lib\libpingyin.so
Compressing system\lib\libPingyinUtils.so
Compressing system\lib\libppbox-armandroid-r4-gcc44-nt-1.0.0.so
Compressing system\lib\libpplivep2p-jni.so
Compressing system\lib\libQQcrypto.so
Compressing system\lib\libspeexwrapper.so
Compressing system\lib\libSync.so
Compressing system\lib\liblccCryptor.so
Compressing system\lib\libtess.so 57%
```

At last ! Choose “6” to close script

```
C:\Windows\system32\cmd.exe

! Compression-Level: 9 ! Heap Size : 512mb ! Update.zip Manager : v3.0 !
***** Update.zip Creator*****

1. Create updater-script
2. Create Update.zip (from files within placehere folder)
3. Push to Sdcard
4. Select compression level for apk's
5. Set Max Heap Size (Only change if when signing the zip disappears)
6. Exit

*****

Please make your decision: 6
```

Go back to your folder and rename

Replace in the factory firmware original “patch” by modded !

After that **just flash your tablet!**

Your own custom ROM is made!
