

Detailed instructions in  
the pictures for installing  
the LMC Google camera  
R15/R16/R17 on the  
23rd series Samsung  
smartphones.

1. Download and install the camera

(I recommend installing a package with the name Scan3D, it is the most trouble-free and works practically for everyone).

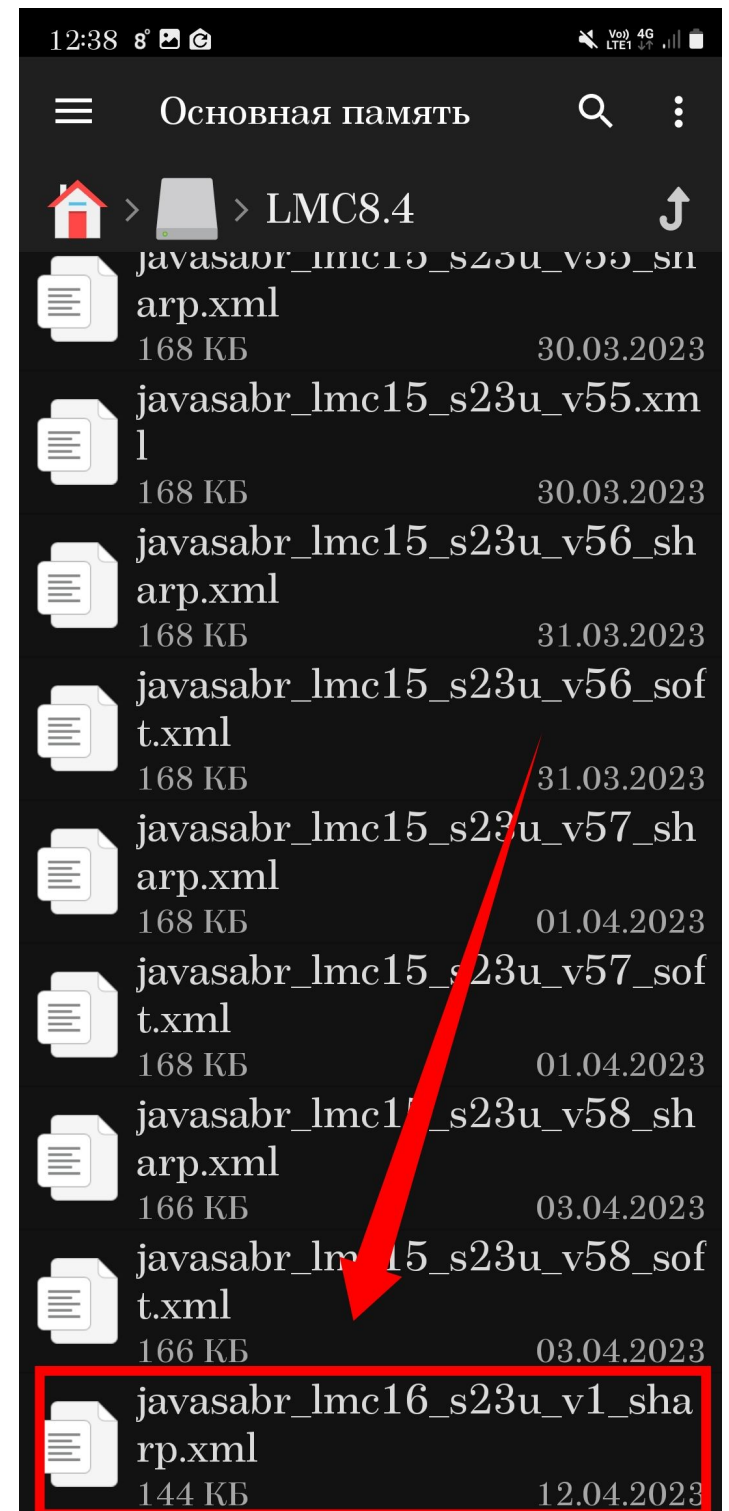

2. Do not run!!!

3. In any file manager, we check if there is a folder called LMC8.4 in the internal storage. If not, then it needs to be created!!!

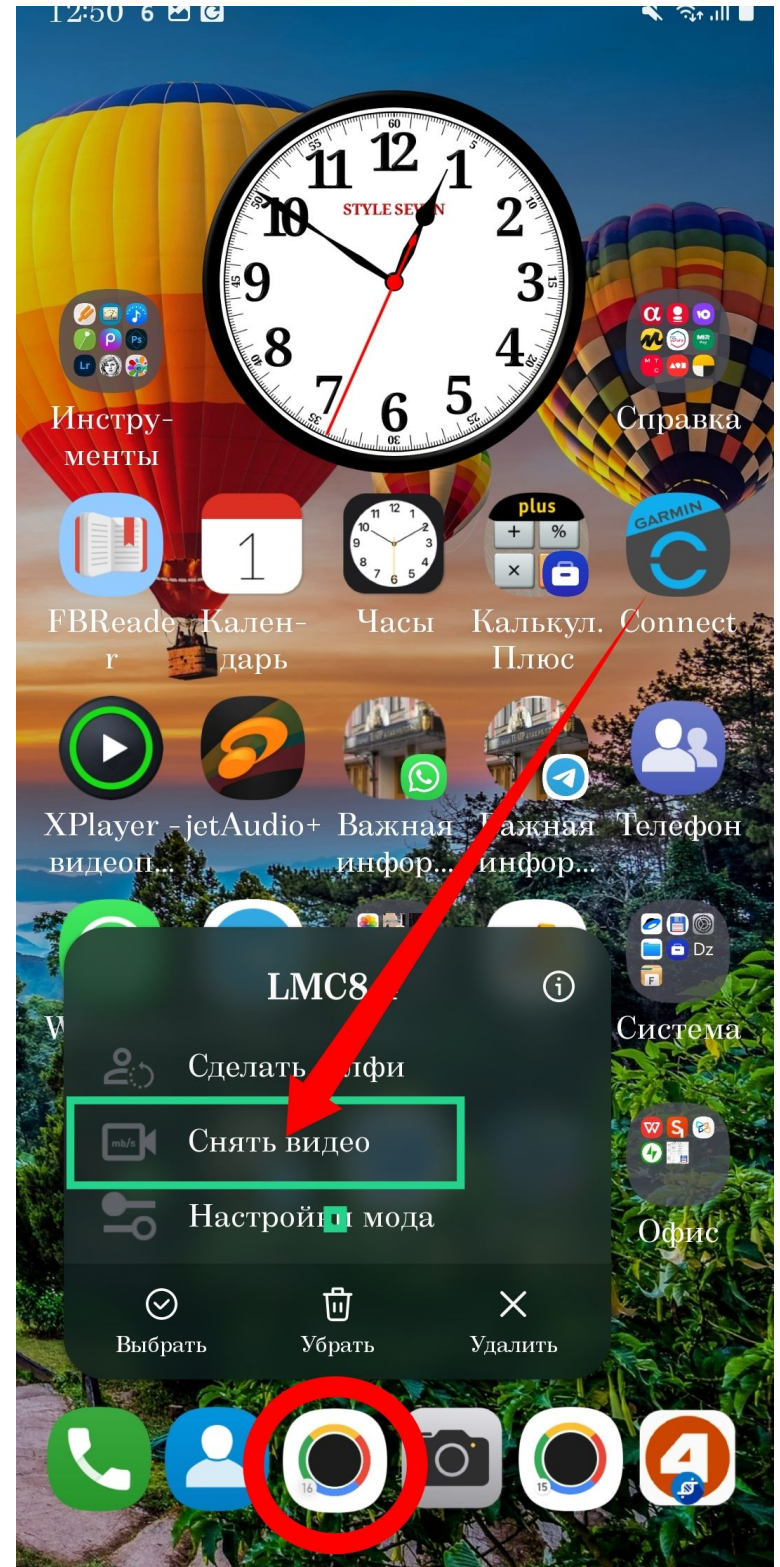

4. Download the desired config (software/medium/sharp or all).

5. We place the config/configs in the LMC8.4 folder, in the internal storage of the smartphone.

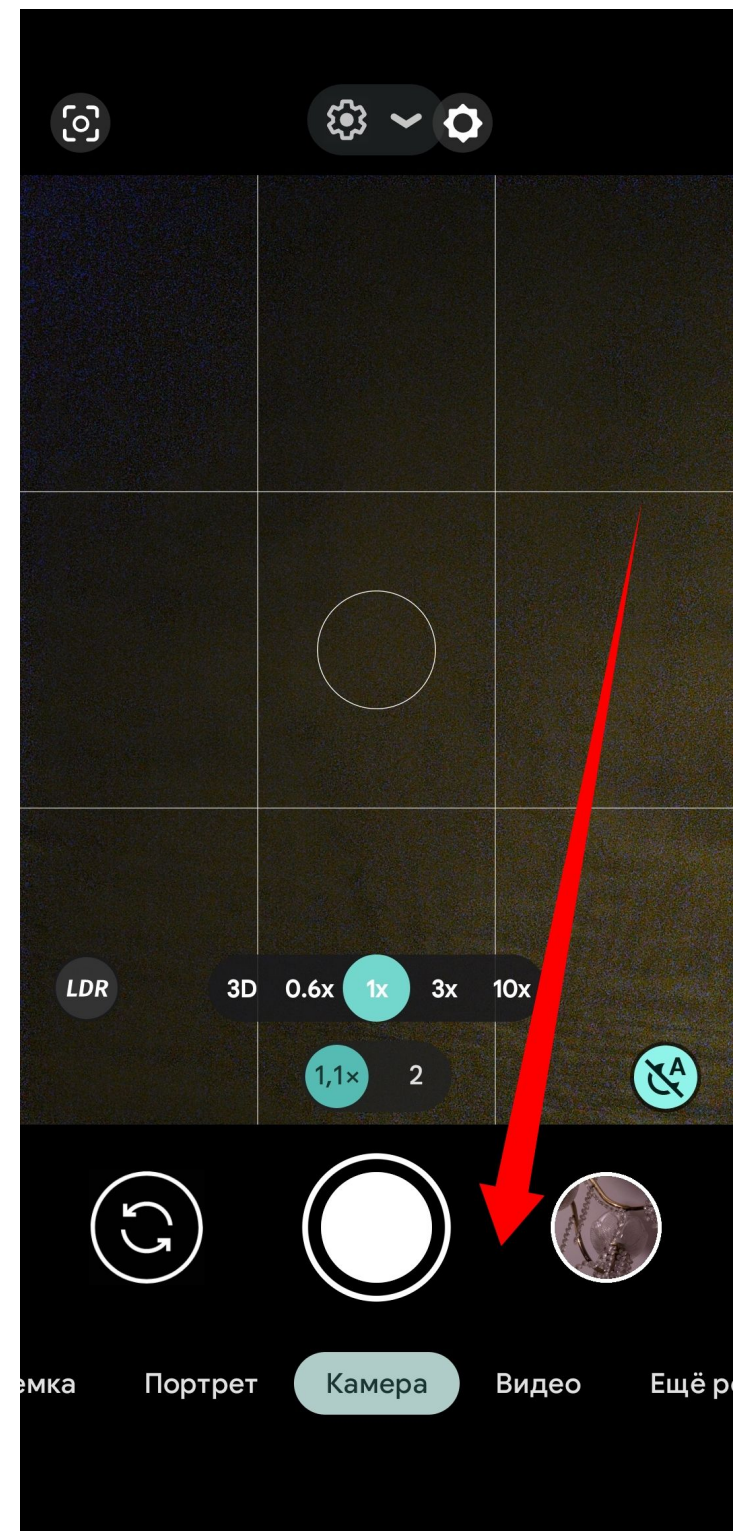

6. We find the LMC R16/R17 application icon, make a long tap on it until the context menu appears and choose "shoot video".

7. In the opened application, the cameras make a double tap on an empty area, between the shooting buttons and the gallery and select the desired config.

Then  
click  
"import"

•  
The  
camera  
is ready  
to shoot.
